Remodelling existing golf courses

## Ross Perrett

REMODELLING established golf courses is an important part of the work that Golf Course Architects undertake. Golf courses are dynamic, are constantly changing and are affected by incremental tree growth, changing weather patterns and poor maintenance practices. Not all these changes are positive and at times it is necessary to intervene to rectify the situation. Unfortunately, there is often unnecessary interference by overzealous committees desperate to leave their mark on their club's course. Changes are proposed in an attempt to keep up with other courses that compete for members and patronage.

For example, over the past decade nearly every Melbourne Sandbelt course has upgraded their irrigation system and built a new clubhouse. Courses are also being stretched to their limits in an attempt to accommodate the technological advances in golf ball and golf club design.

The first step when planning a course remodelling is to get to know what you are dealing with. The history of the course's development is a fundamental starting point and a review of old plans, photos and club records can be very beneficial. A detailed levels and feature survey is critical as is a thorough understanding of the course's soils, drainage patterns, available water sources, plant material and ecological values. An understanding of the site's constraints and opportunities and the clients expectations helps formulate the project brief which will guide the redevelopment process.

Once a clear brief has been established and tested the next step is to prepare a Masterplan that incorporates all the proposed improvements. Before any work on site commences, the Masterplan should be fully costed, funding secured and a detailed construction program prepared. Consideration of staging need to be

addressed with great care to minimize disruption to golfers and to help manage expectations. Clear and honest communication with members and customers is essential.

The Yarra Bend Golf Course, a popular inner city public golf course is about to undertake a major upgrade which will secure its position as Melbourne's premier public golf course. The operation of the facility was recently tendered by Parks Victoria and the tender included a number of non-negotiable requirements including drought-proofing the course and the rectification of a number of safety issues. The upgrade will initially involve a new irrigation system and minor modifications to approximately half the holes. It will also include the construction of a Golf Academy on a former sports ground adjacent to the course and a mini golf course.

Managing the course upgrade is very challenging

as it is not desirable to close the course or have it in a continual state of reconstruction. Yarra Bend enjoys loyal patronage with many regular players that the management does not want to lose to other public access courses in the area. With this in mind it is proposed to undertake the upgrade as quickly as possible over the winter period when player numbers are reduced. Also the works will be done on a step-by-step basis working on one hole at a time and not on weekends when the course is busy.

The golf course is part of the Yarra Bend National Park located some 5km north east of the CBD. It has been part of the Melbourne golfing landscape for over 70 years and the happy starting point for many golfing careers. It is hoped that nostalgia will play a part in getting many former patrons back to the facility where they first tried golf. The addition of a Bann Lynch golf academy

will also be an attraction and allow patrons to have a lesson and follow up with a game to put their lessons learned to the test.

To create adequate land for the golf academy the first hole has been re-routed. Four new greens that capitalize on the river setting are proposed and will assist in eliminating current safety concerns. Lengthening the course has not been part of the brief as the Yarra Bend regulars include pensioners, lady golfers and many children and middle-age beginners to the game. The quality of the turf — as well as course preparation — are considered far more important than course length when creating an enjoyable golfing experience.

Yarra Bend is a parkland course with tree-lined fairways but this has not always been the case. Early photos of the course confirm that the landscape setting has evolved over generations. Some holes are consequently quite narrow but the
